

Critical Thinking - VPN

Week 11 - Matt Markwald

Pros

- + Offer a high level of security when it comes to protecting communication.[^0][0]
- + Easy file sharing between remote clients.[^1][1]
- + Provide broad network access, meaning applications do not need additional support for 'remote' access.

Cons

- + Requires a professional with a high level understanding of VPN configuration and architecture.
- + Due to the process of encrypting traffic, most VPNs run a lot slower than an open network.
